

Erosion Deposition

by S. Van Zandt 2013

**SPOKEN: Wear it down here build it up there
Landforms they are everywhere
This little ball of clay rock and sand
Is formed by forces upon the land**

Chorus

**Weathering erosion deposition
Weathering erosion deposition
Weathering erosion deposition
The changing surface of the earth**

**There is a mountain range
And it is constantly in change
It rose from tectonic forces underground
Wind and water work to wear it down**

Chorus

**Ice cracks the rock on the mountainside
And gravity makes the land slide
Into the valley where the river slows
It drops its load and a delta grows**

Chorus

**From the mountain tops to the sea
The river carries sand, silt and debris
Across the beach the wind will blow
Making sand dunes that move and grow**

Chorus

**The Great Lakes and valleys and great basins
Were carved by ice during glaciation
They pushed up rocks to form moraines
Now they're weathering back down with wind and rain**

Chorus

**The rock cycle, water cycle and the earth's spin
Can build up the land and wear it down again
Now how do landforms change place and condition?
Weathering erosion and deposition!**

THAT'S RIGHT!

Chorus
