

Name:

Session 1: Meadow

1. When comparing the temperatures between the prairie and the neighboring woodland habitats, which was warmer, and what are some of the factors that play into this result?

2. How do deer help to spread seeds in the prairie?
 - They plant them with their hooves
 - The seeds get caught in the fur and fall off somewhere else
 - They poop out the seeds they have eaten
 - They spit them out after they have eaten the leaves around them

3. Where do deer get their energy?
 - The sun
 - Plants
 - Insects
 - Resting

4. Where do the plants get their energy?
 - The sun
 - Their roots
 - Insects
 - Deer

5. Why are insects important to the meadow?
 - Decoration
 - Pollination
 - Noise
 - Water
